

anticipation / delay

1) 3-2 clave |  $\Gamma^{\epsilon} \downarrow \epsilon \Gamma$  |  $\epsilon \Gamma \Gamma \epsilon$  |

anticipate first bar, not second

ex:  $\left\{ \begin{array}{l} \text{B} \phi \mid \text{E} \uparrow \mid \text{A} - \uparrow \mid \text{A} - \phi \end{array} \right\}$

2) 2-3 clave |  $\epsilon \Gamma \Gamma \epsilon$  |  $\Gamma^{\epsilon} \downarrow \epsilon \Gamma$  |

anticipate second bar, not first

ex:  $\left\{ \begin{array}{l} \text{G} - \uparrow \mid \text{C} \uparrow \mid \text{F} \uparrow \mid \text{D} \uparrow \end{array} \right\}$
